Manufacturing for Safer Communities

New sandbagging machine from the Metal Shop will improve efforts around the region.

At Pheasantland, we not only take pride in the quality of our work but in the ingenuity and creativity shown by our team in developing new products. One such project has kept the Metal Shop's welders and fabricators busy fine tuning a much-needed piece of equipment in time for the spring thaw.

Our Sandbag Machine is a gravity-fed, sandbag-filling system used to fill four (4) sandbags simultaneously. Constructed of 12-gauge steel, the lightweight and portable machine comes with a safety grid, safety shield, and is equipped with four, foot-pedal-operated chutes capable of filling at least 1400 bags per hour using unskilled labor.

The efficiency of community sandbagging operations like these would be greatly improved by this new system.
